It was difficult but enlightening to set up GitHub for the first time while learning to code. The procedure first seemed unclear because setting up Git, getting SSH keys, creating a repository, and comprehending branches and commits were all unfamiliar ideas. I frequently got stuck, especially when I couldn't grasp the problems that displayed in the terminal. It wasn't immediately apparent how Git (local) and GitHub (remote) were related, and synchronizing changes felt like a never-ending game of guesswork.

Furthermore, balancing version control and coding chores added to the stress. I occasionally had to start over because a minor coding error or a Git command I forgot would ruin everything. At times, I felt so frustrated that I wondered if I was even doing
